

Oluwayanmife Uriah Adeniran

Rochester, NY | 3157902853 | uriahadeniran065@gmail.com | bit.ly/uriah_linkedin | [GitHub](#)

Professional Summary

Software engineer with a strong foundation in AI/ML systems, full-stack development, and applied NLP. Experienced building and deploying end-to-end ML pipelines, LLM-driven automation tools, and production backend APIs across internship and research settings. Pursuing an MS in Artificial Intelligence in Business at the University of Rochester, with a track record of measurable engineering impact and a portfolio of complex, independently built ML systems.

EDUCATION

University of Rochester - Simon Business School

MS, Artificial Intelligence in Business

Aug 2026 - Dec 2027

Rochester, NY

Hamilton College

Computer Science and Economics

Aug 2022 - May 2026

Clinton, NY

• **GPA:** 3.72

• **Coursework:** Algorithms and Data Structures, Deep Learning, Computer Architecture, Machine Learning, Linear Algebra

Skills

- **Languages:** Python, C++, C#, JavaScript, R, Bash, SQLAlchemy
- **Frameworks & Libraries:** TensorFlow, FastAPI, Scikit-learn, Hugging Face, SentenceTransformers, Google Test
- **Tools & Platforms:** Git, Azure DevOps, Docker, Firebase, OpenAI API, Ollama, LanceDB
- **ML/AI:** NLP, LLMs, Neural Networks, Transformers, BERT, RAG, Model Evaluation, Keras

EXPERIENCE

Hamilton College

Economics Research Assistant

Clinton, NY • May 2025 - May 2026

- Developed LLM-based auto-labeling pipelines (Python, OpenAI API), cutting manual categorization time by ~10x
- Built and optimized BERT embedding and STM topic models in R to classify 5,000+ legal texts, replacing manual workflows
- Improved classification accuracy from ~60% to 90%+ using prompt-tuned LLMs, a ~50% relative gain over prior models

Voicify

Software Engineering Intern (AI/ML)

May 2025 - Aug 2025

- Built full-stack transcript retrieval system (React, ASP.NET Core, PostgreSQL), eliminating manual email requests and serving 15 users
- Contributed to LLM-driven automation tools (Python, C#, OpenAI) for bug classification and call labeling, saving 2-3 hrs/day

Software Engineering Intern

May 2024 - Aug 2024

- Built a synonym generation tool and analyzed transcript and bug data to improve prompt quality and NLU performance

PROJECTS

RAG Chatbot (LLM + Vector Search) <https://issorientation.hamiltonlits.org/>

Feb 2026 - Present

- Built end-to-end RAG pipeline (Ollama Qwen2.5, SentenceTransformers, LanceDB) with chunking, embedding, and similarity retrieval
- Designed prompt orchestration and retrieval constraints (similarity thresholds) to ensure high-relevance context injection
- Integrated Llama Guard safety filtering and deployed chatbot for scalable, real-time student Q&A

Full-Stack ML Financial Analytics Platform [See ML_TRADING Repo](#)

Feb 2026 - Present

- Built end-to-end LSTM forecasting pipeline (TensorFlow/Keras) covering preprocessing, training, validation, and persistence
- Applied optimization techniques (EarlyStopping, LR scheduling, checkpointing); evaluated using RMSE, MAE, R^2 , and directional accuracy
- Automated pipeline to generate forecasts and update a live dashboard and database for portfolio tracking

Sesame Exchange Shop <https://sesame-exchange-app.web.app>

Oct 2025 - Present

- Built full-stack mobile marketplace with AI image recognition (95%+ accuracy via Open AI Vision Model) and real-time messaging.
- Implemented Firebase backend (Google Authentication and Realtime Database) with Cloudinary CDN integration for optimized image delivery, reducing load times by 60% and supporting 1000+ item listings.
- Developed cross-platform UI in Flutter, enabling smart filtering and authentication for 500+ projected users.

Extracurricular

African Students Association

Nov 2023 - Present

Co-founder & Treasurer

- Co-founded the African Students Association, authored the charter, secured institutional approval, and managed a \$2,000+ budget, growing membership by 500% in the first semester
